

CLICKCLAD: PIPE SIZES

1. What is required are accurate measurements at all times. Pipe size OD. Pipe type. Insulation wall thickness. And the type of insulation being used. If your pipe is already insulated we require the total circumference of the pipe including the insulation, using the appropriate tape measure.

2. Minimum diameter we cater for is 75mm.

Example: Pipe OD = 20mm. Insulation wall 25mm total diameter is $25+20+25=70$ which is too small.
So use 25mm thickness wall insulation with 25mm Pipe OD [$25 \times 25 \times 25 = 75\text{mm}$]

3. Each metre of straight tube cladding requires 3 bands per metre.
